EDUCATION

Indian Institute of Information Technology, Gwalior

Aug 2023 – June 2027

B.Tech in Mathematics and Scientific Computing – CGPA: 8.12

Quantitative Coursework: Probability & Statistics, Statistical Inference, Machine Learning, Data Structures, DBMS

TECHNICAL SKILLS

Data & SQL: Advanced SQL (JOINS, CTEs, window functions, subqueries), MySQL

Analytics & Python: Pandas, NumPy, Scikit-learn; EDA, KPI tracking, A/B testing, statistical inference

Visualization: Matplotlib, Power BI (basic), Excel (pivot tables, lookups)

Machine Learning: Logistic Regression, Random Forest, XGBoost; class imbalance handling, threshold tuning

Tools & Workflow: Git, Jupyter Notebook, VS Code, reproducible analysis pipelines

PROJECTS

- **Marketing Campaign Performance Analysis & Budget Optimization** Python, Pandas, SQL
 - Queried 500+ campaign records using SQL JOINS and aggregations; computed channel-level ROI, CPA, ROAS, CTR, revealing a 2.6x performance gap between best and worst channels
 - Built Python-based budget reallocation model shifting \$50K from Email (0.8x ROI) to Social Media (2.1x ROI), projecting 18–22% overall ROI lift without increasing spend
 - Delivered comparative visualizations highlighting spend efficiency by channel, directly informing Q4 budget decisions
- **Credit Card Fraud Detection with Class Imbalance Handling** Python, Scikit-learn
 - Developed fraud classifier on Kaggle dataset (284K transactions, 0.17% fraud); applied SMOTE and evaluated Random Forest, XGBoost, and Logistic Regression
 - Tuned decision threshold from 0.5 to 0.35 to achieve 92% recall at 88% precision, balancing fraud recovery (\$500–\$2K per case) vs false declines
 - Maintained false positive rate under 5% to reduce manual review costs while capturing 9/10 fraud cases
- **Stock Direction Forecasting with Sector-Specific Evaluation** Python, PyTorch, SQL
 - Extracted and preprocessed 10 years of NSE data for 15 stocks using SQL and Python; enforced strict train-validation-test splits to prevent look-ahead bias
 - Trained CNN with MACD-based features achieving 76% directional accuracy (vs 50% baseline); banking stocks reached 80–82% vs 68–72% for energy
 - Documented limitations: no live trading validation, degraded performance in high volatility, excludes transaction costs; suitable for trend analysis, not automated trading

CERTIFICATIONS

IBM Data Science Professional Certificate – IBM / Skills Network

Hands-on work in SQL querying, data wrangling, supervised learning, and model evaluation

LEADERSHIP & COORDINATION

Aurora Cultural Fest – Client Relations Associate

Dec 2023 – Mar 2024

IIIT Gwalior

- Managed Excel-based outreach database for 50+ institutions; reduced response time by 30%

Rotaract Club – Logistics Coordinator

Aug 2024 – Present

IIIT Gwalior

- Coordinated donor registration and logistics for blood donation camp reaching 100+ participants

INTERESTS

Badminton — Financial markets & risk analysis — Dashboard design
